

FOR IMMEDIATE RELEASE

31 January 2008

TINCI WINS NEW FGD CONTRACTS

The Directors of Tinci Holdings Ltd. ("the Company" or "Tinci") (TINCI), the AIM listed environmental engineering company, today announced that the Company has successfully tendered for a series of new contracts, totalling over RMB 145 million (approximately £10.2 million), in line with the Company's strategy to increase market penetration in the small to medium desulphurisation market in China.

The Company has recently been awarded three flue gas desulphurisation (FGD) contracts at the following plants:

- **Ningbei:** Tinci has signed a contract for RMB 59.56 million (approximately £4.2 million) with Ningbei Aluminum and Power Co. Ltd. in Qinghai province for a 2×135MW FGD project. The Company will use Wet Limestone FGD technology to complete this project. This is the first Wet FGD contract that Tinci is executing on behalf of the Aluminum industry in China, further demonstrating the growing levels of confidence the market has in Tinci's FGD capabilities.
- **Xinfa Huaxin:** This tender was awarded for RMB 52.55 million (approximately £3.7 million) by Xinfa Huaxin Aluminum Co. Ltd. in Shandong province for a 2×260T/H and 2×520T/H FGD project. This project will be completed using Wet Limestone FGD technology.
- **Chiping Xinyuan:** This tender was awarded for RMB 33 million (approximately £2.3 million) by Chiping Xinyuan Aluminum Co. Ltd. in Shandong province of Shandong Xinfa Aluminum and Power Group for a 2×410T/H FGD project on January 1st 2008. This is the second project that Tinci will be undertaking for the Xinfa Aluminum and Power Group. This is

a clear reflection of Xinfra's confidence in Tinci's ability to execute such projects to a high standard. Tinci will use their Wet Limestone FGD technology to complete this second project.

Mr Xu Jinfu, Chief Executive Officer of Tinci Holdings Ltd., commented: "We are delighted to be able to announce these new contracts which further demonstrate the growing confidence in our FGD technology. We are promoting our FGD technology throughout China in an attempt to increase our market share in the small to medium flue gas desulphurisation market. Winning tenders such as those announced today reflects our reputation for executing high quality projects. We continue to refine our techniques and processes to ensure that Tinci delivers the highest quality products to our target market."

ABOUT TINCI HOLDINGS LTD

Tinci Holdings Ltd. is the parent company of Tinci Sanhe Environmental Engineering Co. Ltd., an environmental engineering company founded in October 2001, which is primarily involved in developing, manufacturing and installing flue gas desulphurisation (FGD) systems for reducing sulphur dioxide (SO₂) emissions from coal-fired power stations and large industrial boilers in China.

Sulphur dioxide discharges rose 27% between 2000 and 2005 in China, where air pollution is blamed for more than 400,000 premature deaths a year. China's State Environmental Protection Administration (SEPA) has estimated that existing and new Chinese plants will require total FGD investment of RMB 102 billion (c. £6.9 billion) from 2006-2010, with the total investment required expected to rise to RMB 190 billion (c. £12.9 billion) by 2020.

As one of the top ten FGD companies in China, Tinci is well positioned to benefit from the current demand for FGD technology in China. The Company's shares are traded on the AIM market of the London Stock Exchange under the symbol 'TNCI'.
