TINCI WINS FIRST PROJECT USING NIRO SDA TECHNOLOGY IN CHINA

Tinci Holdings Ltd. ("the Company" or "Tinci") (TINCI), the AIM listed environmental engineering company and one of the leading Chinese companies in the global fight against "Acid Rain", today announced that Tinci Sanhe Environmental Engineering Co. Ltd. ('Tinci') has won a competitive bid to provide flue gas desulphurisation ('FGD') technology to the Jiaozuo Jinguan metal production plant in Henan province, China.

The Jiaozuo Jinguan project will be the first in China to use the Niro Spray Dryer ('SDA') process, which is licensed to Tinci in China and is one of the world's most established FGD technologies. The project is estimated to have a contract value of RMB 50.5 million (£3.4 million) and a duration of eight to ten months.

Mr Xu Jinfu, Chief Executive Officer of Tinci Holdings Ltd., commented:

"The SDA technology is broadly used in other parts of the world and has proven to reduce sulphur dioxide (SO₂) emissions by over 90%. As a licensee of Niro's SDA Technology in China, we are proud to have won this contract, which has a particularly strong strategic significance for Tinci. Through this project, our company will introduce SDA in the Chinese market, where there is growing demand for FGD solutions that efficiently reduce SO₂ emissions and fight their devastating consequences on the environment, the population and the economy."

ABOUT TINCI HOLDINGS LTD

Tinci Holdings Ltd. is the parent company of Tinci Sanhe Environmental Engineering Co. Ltd., an environmental engineering company founded in October 2001, which is primarily involved in developing, manufacturing and installing flue gas desulphurisation (FGD) systems for reducing sulphur dioxide (SO₂) emissions from coal-fired power stations and large industrial boilers in China.

Sulphur dioxide discharges rose 27% between 2000 and 2005 in China, where air pollution is blamed for more than 400,000 premature deaths a year. China's State Environmental Protection Administration (SEPA) has estimated that

existing and new Chinese plants will require total FGD investment of RMB 102 billion (c. £6.9 billion) from 2006-2010, with the total investment required expected to rise to RMB 190 billion (c. £12.9 billion) by 2020.

As one of the top ten FGD companies in China, Tinci is well positioned to benefit from the current demand for FGD technology in China. The Company's shares are traded on the AIM market of the London Stock Exchange under the symbol 'TNCI'.
